FORGEWOOD

Thermally Modified Siding

Building is a craft that demands both exceptional skill and the high-quality materials to match. ForgeWood thermally modified siding takes the age-old concepts of woodworking and tempering and uses carefully calibrated technology to increase each board's rot resistance and stability. Curated natural and prefinished options are ready for any design.

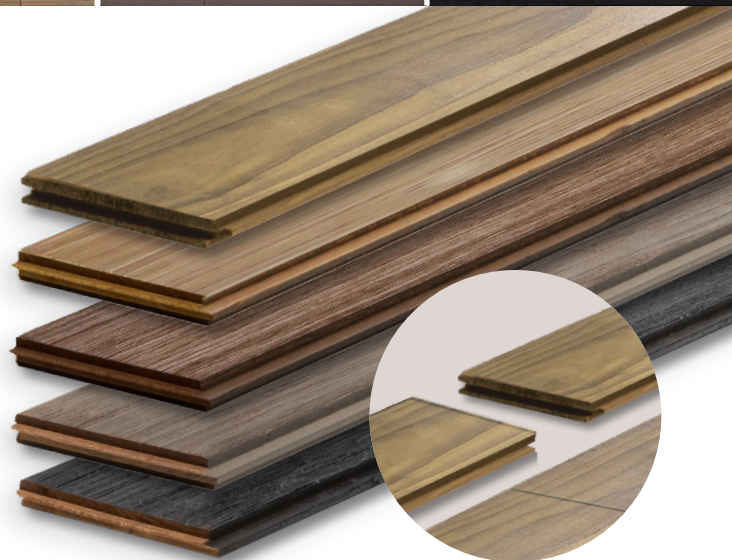

FEATURES

- 20-year limited warranty (rot/decay)
- All-natural wood preservation process reduces expansion and shrinking
- End-matched profile for faster install and less waste
- Tongue and groove interlocking pattern
- Available in 1x6 and 1x8 T&G nominal widths and random lengths from 11 ft. to 16 ft.

AVAILABLE PROFILE

T&G Nickel Gap

WHAT IS END-MATCHING?

End-matching is the process of machining a tongue on one end of a board and a groove on the other, creating a joint that locks boards securely end-to-end. It eliminates the need to break on a stud, saving time, labor, and reducing waste during installation.

ARTISTRY THAT ENDURES

Inspired by metalwork, ForgeWood delivers both practicality and an elevated look. Natural or two-tone prefinished thermally modified poplar adds unmatched authenticity to any design with charming details.

- Wire-brushed prefinished colors
- Raw is smooth with tone variation
- Versatile grain with small knots

MATCHING TRIM:

1x4 and 1x6 trim available

NOTE: Color will vary from board to board and lot to lot due to natural characteristics of wood. We recommend purchasing your entire job, plus a minimum of 10% overage to ensure most consistent color.
